brain atlas version | semantic data type
disease model | laterality
anatomical identification type
chemical mixture type | stimulation approach
cranial window type | qualitative overlap
data type | molecular entity
operating device
language | licenses
programming language
technique | cell culture type
file bundle grouping | type of uncertainty
anatomical plane | device type
parcellation entity | atlas type
service | subject attribute
breeding type | ethics assessment
parcellation terminology version
common coordinate space
unit of measurement | model abstraction level
measured quantity | brain atlas
criteria quality type | biological sex
operating system
anatomical axes orientation
biological order | tissue sample attribute
organ | setup type | experimental approach
content type | preparation type
file usage role | stimulus type
annotation type
genetic strain type | parcellation entity version
tissue sample type | UBERON parcellation
model scope | software application category
atlas annotation | disease
parcellation terminology | contribution type | license
subcellular entity | age category | patch clamp variation
file repository type | cell type
(metadata model type) | product accessibility
handedness | difference measure | action status type
software feature
